

1. Name of your country	France	Hungary
2. Name of your breeding association :	AFCF association française du cheval FJORD	Pony and Small Horse Breeding Association
2. Name of your breeding association :		348199
4. What system do you use to attribute a UELN number to the horses registered at birth in your studbook?	WE STARTED IN 1977 UELN IS 250 FOR France 2 NUMERAL FOR YEAR THAN COVERING NUMMER (wich is attribute for every stallion which asked a cover autorisation	348199FD1404500 number of Hungary 348. number of data base 1, code of database 99, breed sign FD, the last two numbers of the birth year 14, foal number given by the breeding association 045 and two technical caracters at the end
5. Can UELN numbers of horses registered at birth in your studbook be found in an online database? If yes, mention the link to the database :	yes this is on the IFCE web side open for every body since january 2018	
6. How do you proceed to give a UELN number to a horse, registered in your studbook BEFORE you were using the UELN code ?	2 numeral for birth year and cover nummer	The identification number is 100% convertable.
7. Do you use the origin UELN number of a horse, registered at birth in an outside studbook, when this horse is entering in your studbook? (for exemple to participate in a breeding show, or import, or as a breeding horse...)? Explain how you proceed.	yes	There can be only one UELN number during the entire life of a horse, therefore it can't be changed.
8. If an outside breeding association needs the UELN number of a horse, registered at birth in your studbook, how can it be requested? Give the contact information of a responsible person:	ifce	Kőrösi Krisztina: info@mlosz.hu Németh Zoltán: nemeth.zoltan@capriovus.eu
9. How do you proceed, when a horse has several UELN-numbers?	in France it can't exist

756005, start in	056-008-..... I think we started in 2007	5280150. Started in 1994 with a studbooknumber of 8 marks.
No system, the UELN is given by the national database of farm animals called "agate"	for example 056 – 008 – 00 0020170001 for the first foal born in 2017	First the UELN number, then the year the horse was born and then 4 numbers of the number entering the studbook
www.agate.ch But you can only check a number that you already know and only when you have horses yourself and by this an access to the database.	056 for Belgium 008 for Fjord 0000year000number of the foal born in that year	Fjordstudbook.com
First UELN-Code of the SVPK, and at the end of the UELN we integrate the existing breeding number. To fill in the empty spaces, we put so many zeros as necessary.	We use the the origin number in the code "Old number" in our program. We don't give a new number.	We put the number before his registration number. If we don't have enough notes then we put --- in it. For example: Jillgard J-120 becomes 5280150J-120---
Yes, we use to the origin UELN number whenever we have it.	We use the origin UELN number. For old numbers which do not have 15 figures we have the possibility to note the original number in the place "Old number" in our program	Yes if it works in our computer system. Because we can't have two the same numbers
The responsible person for the studbook can give the UELN-number. For Fjordhorses this is Fjordpferd Yvonne Frey, Schönauring 86, 8052 Zürich, Tel. +41 79 308 40 50, freyyvonne@hotmail.com	Mail to the secretary : web@fjordstudbook.be Contact : Francine Van Buggenhout	Fjordstudbook.com
		We use the UELN number of the horse when it was registered at birth

United Kingdom of Great Britain	USA	Norway
Fjord Horse National Studbook Association of Great Britain	Norwegian Fjord Horse Registry (NFHR)	Norwegian Fjord Horse Association. But Norwegian Horse Center at Starun is issuing passports.
826028 2001	No	Yes. The iso and database code is 578002. UELN in 2008.
As soon as the foal's identification papers signed by a veterinary surgeon are received at the office, the foal is assigned a UELN	N/A	The UELN is generated by our database. In addition to the six first digits, the number is generated as follows based on the breed, gender and birth year of the horse. 578002+0+YEAR+BREED. We also separate the sexes, the male horses have a UELN ending with uneven numbers, and mares even numbers. So that a fjord horse MARE born in 2011 will receive the following number: 578002020112546 and a fjord horse stallion born in 2015: 578002020152513.
Yes eventually. The Central Equine Database which is run by DEFRA and is about to be launched.	N/A	Yes, but only through looking up the name of the horse: http://www.nhest.no/Andre-elementer/Sok-etter-hestkusklop/?modus=2
As each older (pre-UELN) fjord is issued with a passport, it is automatically assigned a UELN	N/A	The structure of the UELN is based on the old registration number (that had a structure based on birth year, breed and gender), so that after request a UELN is generated with the four last digits being the four last digits of the old registration number.
YES we do. We also issue it with a UK registration number for internal use.	N/A	The origin UELN is entered as the horses UELN in the database.
Lyn Moran, Fjord Horse National Studbook Association of Great Britain, Cilyblaidd Manor, Pencarreg, Nr Lampeter, Carmarthenshire, SA409QL Tel: 0044 1570 480090 E-mail: info@fjord-horse.co.uk or wistra1-fjordhorse@yahoo.co.uk	No, we currently do not assign UELN numbers	registrering@nhest.no
We trace back to ascertain which was the originally assigned UELN as an equine must not have multiples.	N/A	We have not have had such a case, but if it should happen we would use the UELN from the database/country of birth.

This is a precis of our system which of course is more complex to take in all situations.	The NFHR is interested in knowing more about UELN numbers and how this will benefit horses registered in our Registry.

Sweden	Denmark
Svenska Fjordhästföreningen	Fjordhesten Danmark
Yes, 752024 All horses even the older ones get an UELN in the data base.	We are part of a national studbook-office. All passports issued there starts with the code 208333
752024(breedcode, breedcode - which is 024 for a purebred fjord)xxxxxx (year of birth) xx reg nr xxxx (these reg numbers start with 0001 for the first each year, then 0002 and so on) This 15 numbers give an unic number for each horse.	208333FJ18 or 2083332018 and five more ciffers are given to a foal born in 2018. Same system in the years before.
Yes. Www.svehast.se look for "Blå Basen"	Yes, but the database is not public accessible. If you need information you are welcome to contact the breeding committee in Denmark.
Breedcode 24 (or 74=horse who do´nt have 3 accepted generations) year of birth xx reg nr (starting with 0001, then 0002 for each year and so on) xxxx gives: 24-xx-xxxx or 74-xx-xxxx	Before the UELN-code we used a 7-digit number, and it was easy to put the UELN code and the first two digits of the birth year in front of the 7-digit number.
The horse keeps the original UELN but we give it a swedish 6-figurs reg nr to fit in our system for example: 24-xx-xxxx	Yes we use the UELN-number from other countries, when an imported Fjord Horse is entered in our studbook.
Yes. Www.svehast.se - Blå Basen or annerli.johansson@gmail.com	E-mails can be sent to avl@fjordhest.dk - the answer will begiven by a person in the breeding committee.
It have´nt happend and should not be possible according to the rules.	A Fjord Horse bred in Denmark cannot have more than one UELN-number. If a horse from abroad has several numbers (sounds horrible) every number will be registered, but the main number will be the one connected to the country/office, where the birth was registered.

Annerli Johansson /registrator Svenska Fjordhästföreningen	Birgit Mortensen (avl@fjordhest.dk, birgit.fjordhorse@gmail.com)
